## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. **Claims 1-4** are rejected under 35 U.S.C. 102(e) as being anticipated by US 6,027,122 to Bertetti et al.

Bertetti discloses a sealing device comprising two races (3, 5), two inserts (15, 31), sealing lip (28, 29), phonic wheel (39) supported by the more external insert (31), annular housing (33) and a vulcanized rubber shield (35) as claimed. The housing is radially delimited by a first and second cylindrical wall (32 and end of 33). The second wall has a cylindrical edge defines an outer radial limit for the shield and an annular channel (42). The shield also defines a static seal against a race (3) of the bearing and a dynamic seal against the annular channel (42). Official Notice is taken of the fact that commercial useful rubber is vulcanized.

Art Unit: 3676

*Response to Arguments*

3. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection. Bertetti expressly discloses a phonic wheel incorporated into the bearing to measure the relative rotational speed of the two races of the bearing (see Bertetti, column 1, lines 5-22).

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: US 5,372,435 to Genero et al.
